What's the use of a swap

Many items you can buy for your station cost a lot of materials. Of course you can compose a train yourself and send it away for several hours to get the materials. That may cost you a lot of time. An other way to get the amount of materials you need is to exchange materials for gold or other material with one of your TS neighbours, this is the so called Swap. You can advertise your need and your offer via the software (the member pages) by defining your Swap. The next chapters describe how to make and administer your swap.

Defining a Swap.
